STONE CONSERVATOR
APPLICATION PACK
Overview

John Ruskin, the great Victorian art historian and critic, described Lincoln as “the most precious piece of architecture in the British Isles and roughly speaking worth two of any other Cathedrals we have.”

The Cathedral Church of the Blessed Virgin Mary of Lincoln (to give it its proper title) is first and foremost a church, the seat of the Bishop of Lincoln and a centre of worship and mission. A minimum of three services takes place each day of the year, at least one of which is usually sung by the Cathedral’s renowned choir. It is the principal church of Lincolnshire and holds many of the county-wide services of celebration, commemoration and memorial.

There is a real richness and variety in the way the Cathedral building is used. Significant musical and dramatic events take place, as well as an active lecture series each year with key speakers offering their insight into current and historical affairs.

Lincoln Cathedral is a place of pilgrimage, where people come to seek God, to learn more about faith, or to take time out of a busy day for quiet reflection. It is a place of welcome and hospitality where all of any faith or no faith are encouraged to feel at home.

Last but not least Lincoln Cathedral welcomes over 200,000 visitors a year who come to marvel at and enjoy a Cathedral that represents the highest achievements in medieval engineering, craft and design. Today skilled craftspeople and conservators, employed by the Cathedral, strive for excellence in everything that they do to and for the building; leaving their own legacy for those who follow.

A Brief History

After the Battle of Hastings in 1066 William the Conqueror established a castle in the south-west corner of the old Roman city of Lincoln (Lindum Colonia). One of his supporters, Remigius Bishop of Dorchester, was instructed to transfer his cathedral to Lincoln in order to consolidate Norman power in the north. Construction commenced in 1072 and the building was consecrated as a Cathedral in May 1092, two days after Bishop Remigius’ death.
Before long the country was plunged into civil war again as King Stephen and Empress Mathilda fought for seventeen years for control and in this period, probably around 1141 the Cathedral was damaged by fire and a partial rebuilding was ordered by Alexander the Magnificent (Bishop of Lincoln 1123-1148). Disaster struck again and in 1185 an earthquake destroyed all but the West Front and its twin towers. Hugh of Avalon arrived in 1186 and he set about fundraising for a rebuilding which began in in 1192. Hugh died in 1200 before the great transept and Nave were finished, and was buried in his Cathedral. Miracles were experienced by those who came to pray at his tomb, and in the space of 20 years he was proclaimed a saint by the Pope. By 1255 the numbers coming on pilgrimage to his tomb were so great that it was decided that an extension at the east end should be built.

Hugh’s body was transferred to the new “Angel Choir” in 1280 and pilgrims continued to come, paying for further beautification of the building so that between 1307 and 1311 the central tower was raised to its present height, and later that same century the two western towers were heightened. Wooden spires covered with lead were added so that for two hundred years Lincoln Cathedral was the tallest building in the world. Alas, in 1548 the spires on the central tower collapsed.

The Reformation brought great changes to Lincoln and between 1540 and 1548 the chantry chapels were dissolved, St. Hugh’s body was removed, the shrine was stripped of its jewels and the treasury of its contents and the content of the daily services was vastly simplified. However the greatest threat was posed by the English Civil war one hundred years later when the Cathedral Close was besieged in May 1643 and the Cathedral pillaged. The round of daily services was abandoned and the building fell increasingly into disrepair.

The restoration of the monarchy in 1660 saw the appointment of Dean Michael Honywood. He was a deeply cultured and scholarly priest whose concern for the dignified worship of God led to a revival in both liturgy and fabric. He paid for repairs to the building, built the Wren Library, made new appointments to the choir and ensured that the revised Book of Common Prayer was in use from 1662.

By 1726 the weight of the western towers and spires were causing them to lean and in 1729 the architect James Gibbs added cross walls for strengthening. The western spires were finally removed in 1807 for safety reasons resulting in the Cathedral we see today.

The challenge of raising funds to maintain this great building is with us today. Lincoln Cathedral sits on Historic England’s (formerly English Heritage) risk register as it is recognised that the Chapter needs to raise £1.6million per annum to maintain the schedule of repairs required. A dedicated team of people, clergy, lay and volunteer alike all work together towards this common goal.
Lincoln Cathedral Connected

Lincoln Cathedral Connected is an exciting £16 million project which will transform the Cathedral’s visitor facilities, grounds and internationally important architecture. It will achieve this by engaging a wide range of people with the stories of this magnificent building.

In May 2015 it was announced that Lincoln Cathedral Connected has secured a £900,000 development grant from the Heritage Lottery Fund, with a further £11.4 million earmarked for the project. It is envisaged that the project will complement Lincoln Castle Revealed, helping to put Lincoln on the visitor map and boosting the profile of the city.

Works Department

One of the stated aims and objectives of Lincoln Cathedral is to care for the fabric of the Cathedral, to allow it to speak boldly and imaginatively by careful planned maintenance of the building now and into the future and to develop and share craft skills at home and abroad.

This objective is fulfilled by the thirty members of the Works Department, wholly employed by Lincoln Cathedral. There are five craft teams: Stonemasonry and Conservation; Glazing; Carpentry/Joinery; Leadwork; Domus (Engineering and Maintenance). The Department has its own Archivist and is supported by a small office team.

Within the curtilage of Lincoln Cathedral there are around 80 tenanted historic properties and associated buildings all of which fall under the care and maintenance of the Cathedral Chapter and its Works Department.

Sculpture and Stone Conservation

Lincoln Cathedral is renowned for its wealth of carving and statuary, with one of the outstanding historic facades in England. The Romanesque Frieze which spans the Norman West Front is considered to be one of the finest examples of its kind.
The West Front Gallery of Kings (c.1390), a collection of eleven life-size figures, has survived in exceptional condition. Throughout the exterior and interior of the Cathedral, the quality of craftsmanship and skill on display which has lasted through the centuries is extraordinary.

The Cathedral’s conservation department was formed in the late 1980s in response to concerns about the survival and care of some of the building’s most significant sculpture. Conservation work was carried out on the northern half of the Romanesque Frieze from 1989-2001. At the same time, conservation was integrated into the general fabric maintenance campaign, and the conservation programme on the West Front was begun.

Since those early days, a sensitive and considered approach to the building has become the standard. The masonry and conservation team are currently completing work to the North West turret of the West Front, before moving on the North Transept. Alongside this, an ambitious new five year project, Lincoln Cathedral Connected, is in the process of starting. As well as major re-development of the West Front landscape and North/Dean’s Green, the project will afford the opportunity to complete the conservation of the West Front sculpture which includes the southern run of the Romanesque Frieze, Gallery of Kings and central niche. This will incorporate the erection of an on-site workshop in order to facilitate work which will run in tandem with the existing workshop and fabric maintenance programme.
JOB DESCRIPTION

JOB TITLE: Stone Conservator

RESPONSIBLE TO: Head of Conservation

LIASE WITH: Works Manager, Head of Masonry and other team members

RESPONSIBLE FOR: Delegated stone, sculpture, object and building conservation works on the Cathedral and Close properties

OVERALL RESPONSIBILITIES: For carrying out delegated conservation and restoration procedures in a proper and effective manner

SPECIFIC RESPONSIBILITIES:

- Undertake conservation work on a wide range of objects and materials, both on and off-site, as required

- Undertake surveying and recording prior and post commencement of conservation work, using written, photographic and digital methods

- Assist in preparing method statements

- Prepare reports on stone conservation projects as required

- Carry out all treatment and repair techniques as required, including cleaning using the Joss/Torc, water, poulticing and laser, and stone and sculpture treatment and repairs using a wide range of techniques, including lime

- Work effectively with external contractors/craftspeople/student placements as required

- Assist in planning allocated work and ensure materials, plant and equipment are available at the time work is to be carried out

- Assist in ensuring that the conservators workshop is maintained in a clean and tidy manner and that equipment is maintained and operated properly

- Maintain a high level of workmanship at all times

- Ensure workspaces are maintained in a safe and effective manner and maintain safety, health and welfare at the workplace

- Maintain an understanding of current conservation techniques and research, and participate in professional training and development as appropriate

- Take an active part in mentoring and training apprentices, trainees and students

- Undertake workshop tours, group talks and represent the Cathedral externally as required
**PERSON SPECIFICATION**

**POSITION TITLE: Stone Conservator**

The Person Specification focuses on the skills, experience, knowledge and qualifications required to undertake this role effectively
